

Our big idea is:

How can bridging multiples of 10 be useful when adding a single digit to 2-3 digit numbers?

These are our steps we need to take in order to achieve the big idea:

- How can I adjust a number sentence to make it more efficient when adding?
- How can adding 10 be useful when adding 9 to 2-3 digit numbers?
- How is bridging multiples of 10 an efficient strategy for adding?
