

W/C: 3.4.17/25.4.17

Big Idea: Partitioning strategies for adding and subtracting?

Burning question: How could I work out 183-36?

- *What strategy can I use to add and subtract multiples of 10 and 100?*

25 + 10 = 35
35 + 10 = 45
45 + 10 = 55
55 + 10 = 65
65 + 10 = 75
75 + 10 = 85
85 + 10 = 95

- *What is partitioning?*
- *How can I add 2 and 3 digit numbers in my head?*

- *How can I subtract 2 and 3 digit numbers in my head?*
- *How can I double 2 digit numbers and cross 10 in my head?*
- *How can I subtract 2 numbers when I cross 10s?*

- *What happens when I bridge 10s and 100s adding ones first?*
- *How can I add two digit numbers when I have to cross 10s?*
