

Burning question: Joe thinks that a rectangle contains parallel, vertical and perpendicular lines. Is he correct?

- What is a right angle and where might I find them in real life?

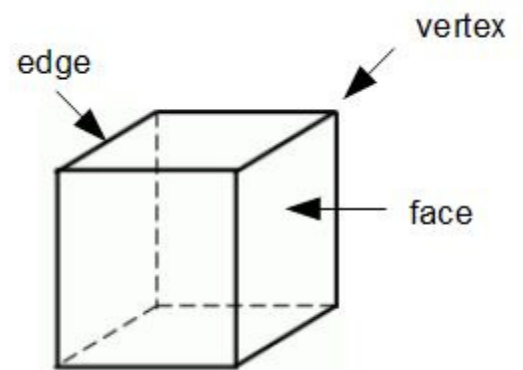

- What do perpendicular lines look like?

- What do horizontal and vertical mean?
- Which shapes contain parallel lines?

- What 2D shapes make different 3D shapes?

- What is a face, edge and vertices in 3D shapes?

- What is the relationship between the number of faces, edges and vertices in any polyhedron?
